Ingeborg Slegers

PROJECTS

THE LOCAL FARMS – ANGULAR WEB APPLICATION

An in-progress project designed to expand understanding of Angular. The application's front-end is being created in Angular 7, Angular Material, and CSS. The server uses PostgreSQL, Express, and Node.js. It features user authentication and extracts JWT retained in local storage.

NEST – ANGULAR WEB APPLICATION

A group project designed during the span of a two-week sprint. The application's front-end was created in Angular 7, Angular Material, and CSS. The server uses PostgreSQL, Express, and Node.js. It features user authentication via AuthGuard, extracting JWT retained in local storage, and administrative capabilities.

JARDIN NAPS – ANGULAR WEB APPLICATION

Created in 24 hours, this group project acted as an introduction to Angular. The application's front-end was designed in Angular 7 and CSS. It features user authentication via extracting JWT retained in local storage. Main role was wireframing, designing, and implementing design.

DEJA BREW – REACT WEB APPLICATION

A project designed during the span of a two-week sprint. The application's front-end was created in React, Reactstrap, and CSS. The server uses PostgreSQL, Express, and Node.js. It features user authentication via protective views and extracting JWT retained in local storage.
